

ICMM 2022 Abstract Submission

LCol Markus Besemann
Chief of Rehabilitation
Canadian Forces Health Services

TITLE: Rehabilitation and Re-integration of military personnel following limb loss.
What matters most?

The lessons learned from recent conflicts have taught us that return to duty following limb amputation is possible and even desirable for many reasons. The factors that influence successful re-integration are multiple and include biological, psychological, social and spiritual aspects. This presentation will outline the most important of these factors using clinical vignettes of the real lived experiences of Canadian military personnel.
